

Accelerate your agreement process with DocuSign

DocuSign is an e-signature and workflow management solution that allows you to quickly and securely sign, send, and manage documents anytime from almost anywhere in the world. DocuSign replaces printing, faxing, scanning, and overnighting documents with the easiest, fastest, most trusted e-signature. It's simple to use and implement, so even complex workflows can be quickly automated, keeping your business moving forward, faster.

KEY FEATURES

E-Signatures

Use DocuSign to complete approvals and agreements in hours—not days—from anywhere and on any device. Quickly and securely access and sign documents. Easily upload and send documents for others to sign. Send reminders and check signing status any time.

System of Agreement

Go digital beyond the signature. Save additional time, money, and errors by automating and connecting entire agreement processes. Embed electronic signing and payment requests into your existing website, portals, and applications.

Authentication

Multiple levels of authentication increase the thresholds required of signers to prove their identity before given access to documents.

Compliance

DocuSign systems and processes meet the industry's most rigorous security certification standards. DocuSign's comprehensive approach ensures the security, privacy, compliance, and enforceability of your DocuSign transactions.

KEY BENEFITS

Save time and money

Agreements are turned around 25 times faster, with 80% of them completed in just one day. Errors are reduced, and the average savings per document is \$36. Working more efficiently, you'll be able to close more deals to boost revenue.

Increase productivity

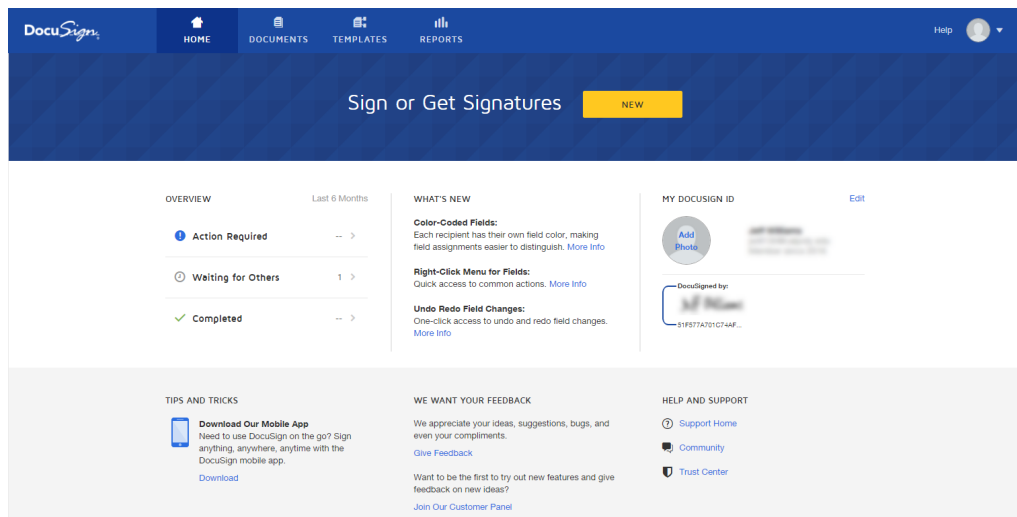

Access documents and close business even while you're away from the office with a unified experience between PCs and mobile devices.

Improve the customer experience

Satisfy customers, partners, and vendors with an easy experience. The average increase in customer satisfaction score is 127%.

Open and extensible

DocuSign has hundreds of out-of-box connectors for common applications and open APIs, allowing you to develop a custom app.
